

# SPORTFLEX

## SPORTFLEX | INDOOR/OUTDOOR MULTI-PURPOSE SURFACE

### PRODUCT DESCRIPTION

Manufactured by Mondo - suppliers of every main Olympic running track since 1976. Sportflex is a prefabricated synthetic rubber multisport surface, made up of two layers - each with its own specific characteristics. In contrast to other systems that are poured in situ, this process creates a molecular bond that eliminates the risk of later separation or delamination of the layers. Designed specifically for Indoor/outdoor running/multi-purpose sporting applications. Thicknesses range from 4.5mm to 13.5mm, depending on project requirements.

4.5 - 13.5mm

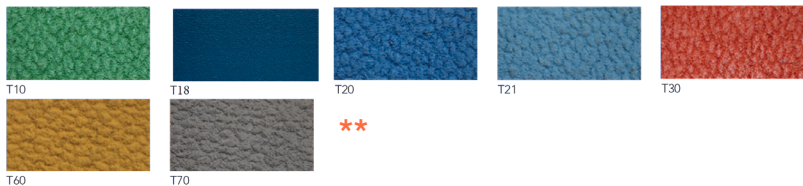

4.5mm - 1.83x25m  
13.5mm - 1.22/1.6x6/15m

5.2 - 12kg/m<sup>2</sup>

### COLOURS

Sportflex is available in a range of seven fashionable and functional colours that will blend into most environments. Minimum orders for production may apply.

### IDEAL APPLICATIONS

- Indoor/outdoor running tracks
- Indoor/outdoor multi-purpose areas
- Indoor/outdoor walkways and corridors

Note: Indoor Application may require a fire rated version. Please contact Rubber Floors for further information.

\*\*Colours may vary between surface finishes and thicknesses, contact Rubber Floors for colour availability

### KEY PRODUCT BENEFITS

#### Strength and durability

The rubber-based top layer is engineered with an adjusted co-efficient of friction to accommodate sports requiring a high level of pivot movement. The non-reflecting texture improves ball bounce and provides an efficient water flow in rainy conditions. The special formulation enhances the product's ability to withstand heavy traffic and abuse in multi-purpose settings.

#### Easy to clean and maintain

Sportflex is free of surface coatings and loose granules that might compromise traction and make the material difficult to clean. Sections of material can be easily replaced with identical material and a virtually invisible seam.

#### Hygienic and odour-free

The non-porous surface is water resistant, so bacteria in perspiration never gets a foothold. This means there's no risk of hard-to-eliminate odours.

#### Environmentally friendly

Sportflex is a mix of synthetic, natural and factory-recycled rubber. It complies with VOC emission guidelines. At the end of its lifespan, it can be disposed of as urban solid waste.

#### Lasting good looks

Sportflex provides a seamless and long lasting appearance. No welding, combined with the material's natural elasticity means joints won't split if the floor settles or expands.

#### Environmentally Sound

Greenguard certified
